

The 'Transfer-First Learning Loop'

The Full 8-Stage Loop

1. **Perception**
What information did the officer detect in the environment?
2. **Attention Regulation**
What information was prioritized as task-relevant?
3. **Sense-Making**
How was the situation interpreted?
4. **Prediction**
What did the officer expect to happen next?
5. **Decision**
What option was selected and why?
6. **Action**
How did the officer's behavior shape the situation?
7. **Error and Success Detection**
Did the outcome match the expectation?
8. **Adaptation**
How was behavior updated moving forward?

Then the loop repeats.

Skills do not transfer because they are learned. They transfer because they are integrated into the performer's perception, attention, prediction, regulation, and action under realistic conditions.
